LAB 11 : AZURE PUBLIC DNS

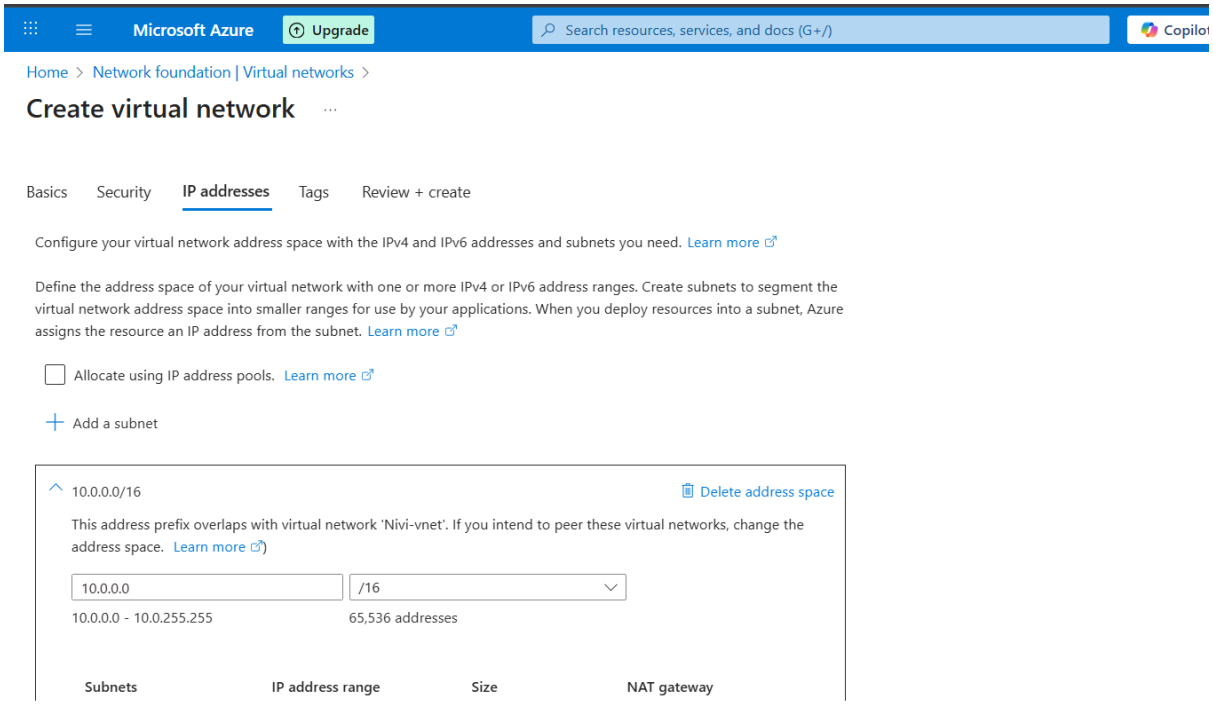

Step 1: Create Resource Group

1. Go to Azure Portal → search Resource groups → + Create
2. Resource group name: studentname-rg
3. Region: East US (or your choice)
4. Review + Create → Create

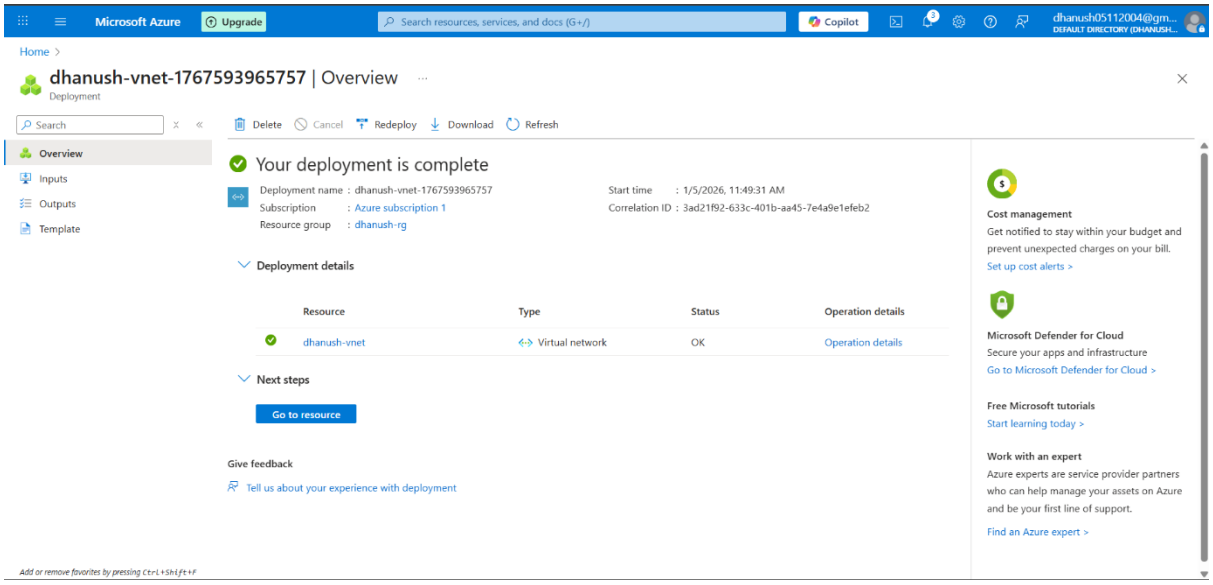

Step 2 : create vnet

Name *
dhanush-public-subnet
IPv4
Include an IPv4 address space
IPv4 address range
10.0.0.0/16
10.0.0.0 - 10.0.255.255
Starting address *
10.0.1.0
Size
/24 (256 addresses)
Subnet address range
10.0.1.0 - 10.0.1.255
IPv6
Include an IPv6 address space
This virtual network has no IPv6 address ranges.
Private subnet
Private subnets enhance security by not providing default outbound access. To enable outbound connectivity for virtual machines to access the internet, it is necessary to explicitly grant outbound access. A NAT gateway is the recommended way to provide outbound connectivity for virtual machines in the subnet. Learn more

Matched from:
Filename    : /usr/bin/nslookup

[root@dhanush-vm ~]# yum install bind-utils-32:9.16.23-34.el9_7.1.x86_64
Last metadata expiration check: 0:17:33 ago on Mon 05 Jan 2026 06:56:56 AM UTC.
Package bind-utils-32:9.16.23-34.el9_7.1.x86_64 is already installed.
Dependencies resolved.
Nothing to do.
Complete!
[root@dhanush-vm ~]# nslookup xmas.parthavps.shop
Server:         168.63.129.16
```

STEP 7 : go to the hosting (eg: hostinger or godaddy)

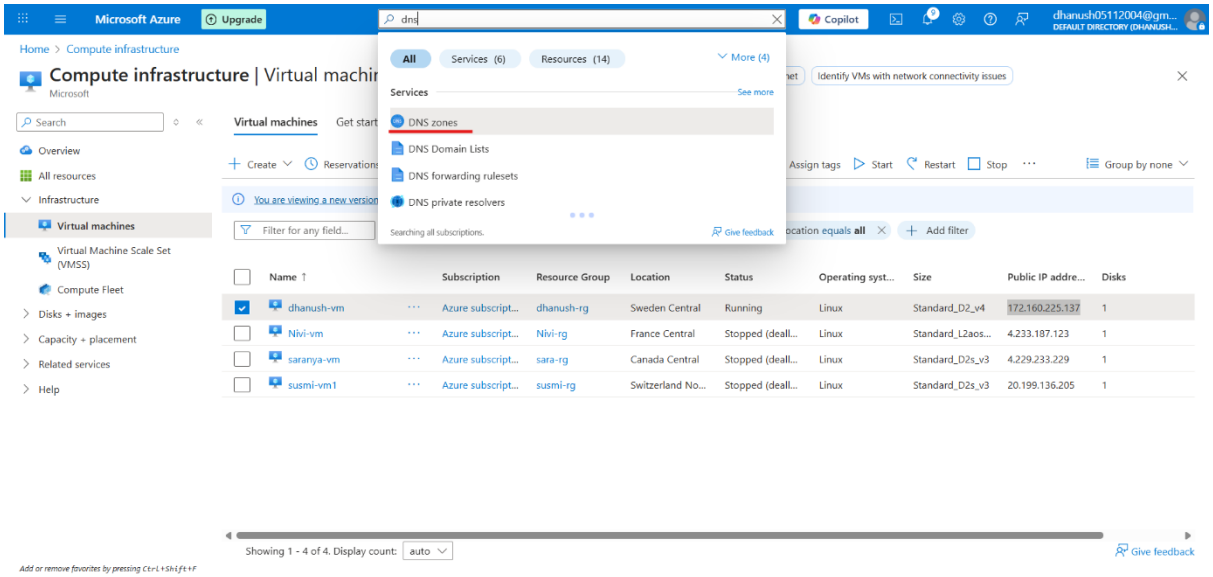

STEP 8 : **Create DNS Zone**

1. Log in to **Azure Portal** → search **DNS zones** → click **+ Create**.
2. Fill in:
    - **Subscription**: Select yours
    - **Resource group**: Create/select (e.g., my-rg)
    - **Name**: example.com
    - **Region**: Any (DNS is global)
3. Click **Review + Create** → **Create**.

✅ DNS zone example.com is now created.

Home > DNS zones >

Create a DNS Zone

Basics | DNS Zone Editor | Tags | Review + Create

Project details

Select the subscription to manage deployed resources and costs. Use resource groups like folders to organize and manage all your resources.

Subscription * : Azure subscription 1

Resource group * : dhanush-rg

Create new

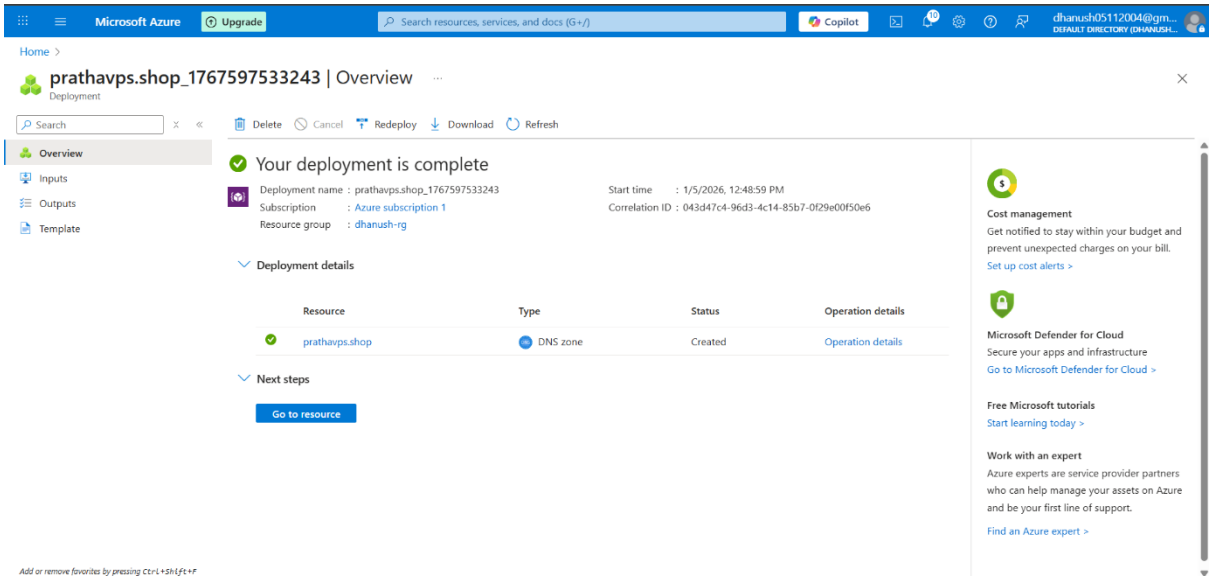

Instance details

☐ This zone is a child of an existing zone already hosted in Azure DNS

Name * : prathavps.shop

Resource group location * : (Europe) Sweden Central

Review + create | < Previous | Next : DNS Zone Editor >

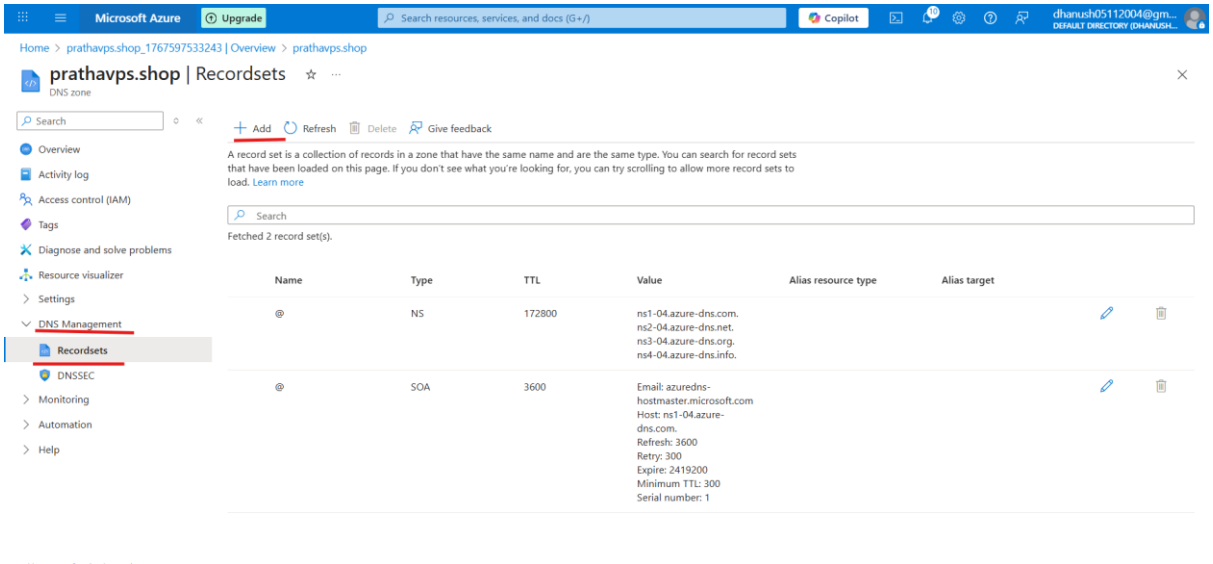

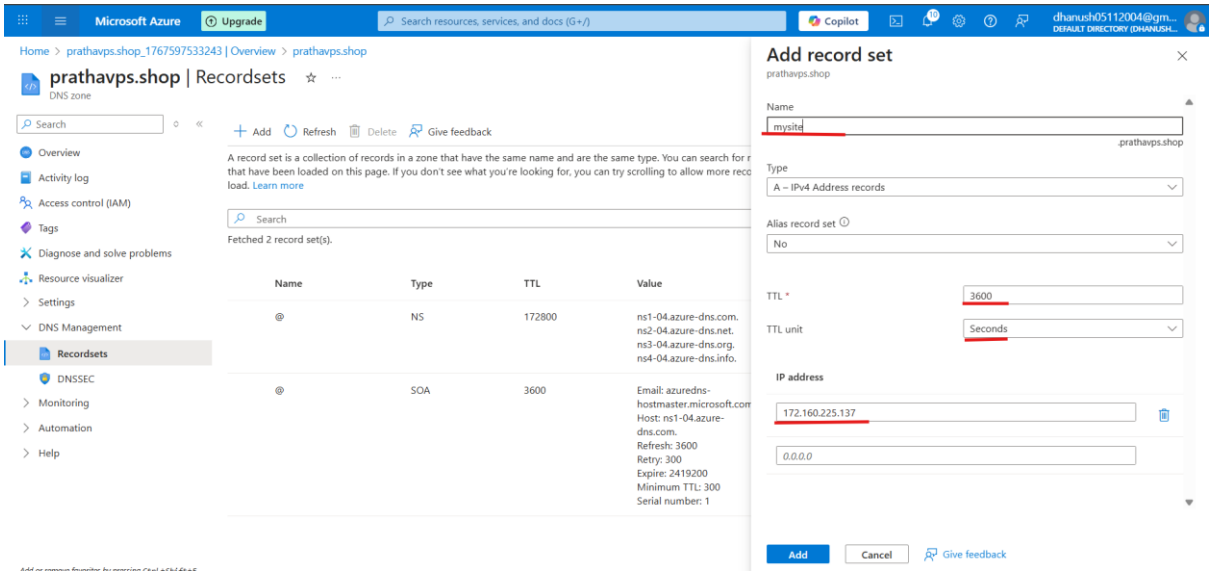

Go to the created dns zones and add the record set

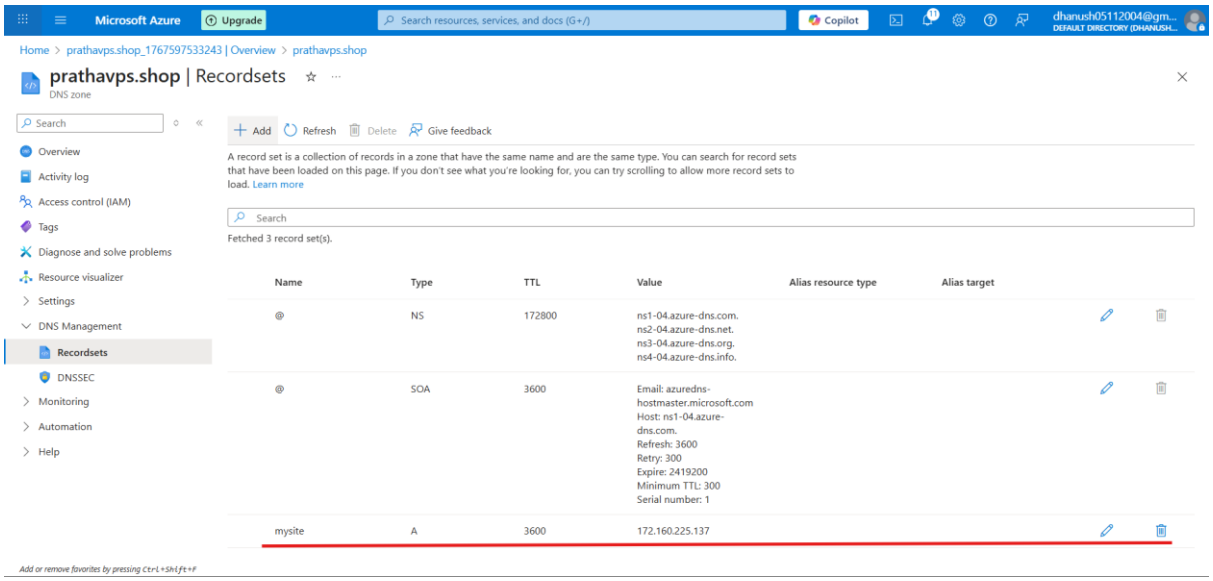

Step 9: Add an A Record (for app.example.com)

1. Open your DNS zone (example.com).
2. Click **+ Record set**.
3. Fill in:
    - **Name**: app (this will make app.example.com)
    - **Type**: A
    - **TTL**: 3600
    - **IP address**: 203.0.113.50
4. Click **OK / Save**.

✅ Now app.example.com resolves to 203.0.113.50.

Go to the the godaddy domain -> dns -> nameserver and add 4 dns name server

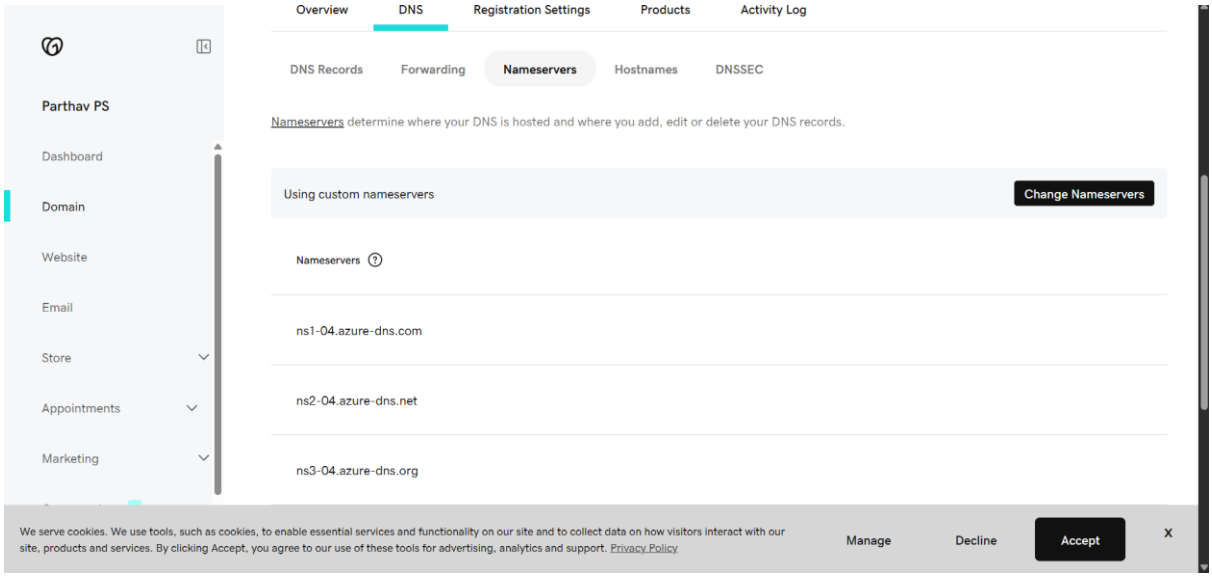

Update Registrar Nameservers

Go to your domain registrar (Hostinger, GoDaddy, etc.).

Replace nameservers with the 4 shown in your Azure DNS zone, e.g.:

- ns1-xx.azure-dns.com
- ns2-xx.azure-dns.net
- ns3-xx.azure-dns.org
- ns4-xx.azure-dns.info

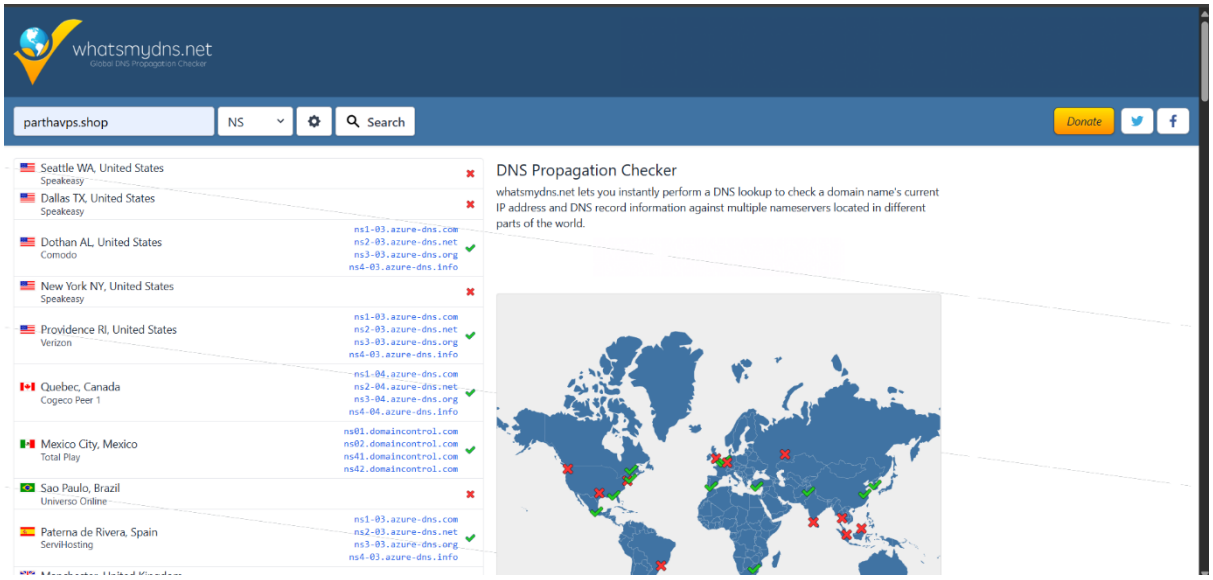

```
C:\Users\DHANUSH>nslookup -type=ns parthavps.shop
DNS request timed out.
    timeout was 2 seconds.
Server:  UnKnown
Address:  192.168.0.1

Non-authoritative answer:
parthavps.shop  nameserver = ns1-03.azure-dns.com
parthavps.shop  nameserver = ns4-03.azure-dns.info
parthavps.shop  nameserver = ns2-03.azure-dns.net
parthavps.shop  nameserver = ns3-03.azure-dns.org

C:\Users\DHANUSH>
```

To check whatsmydns to verify the dns public server

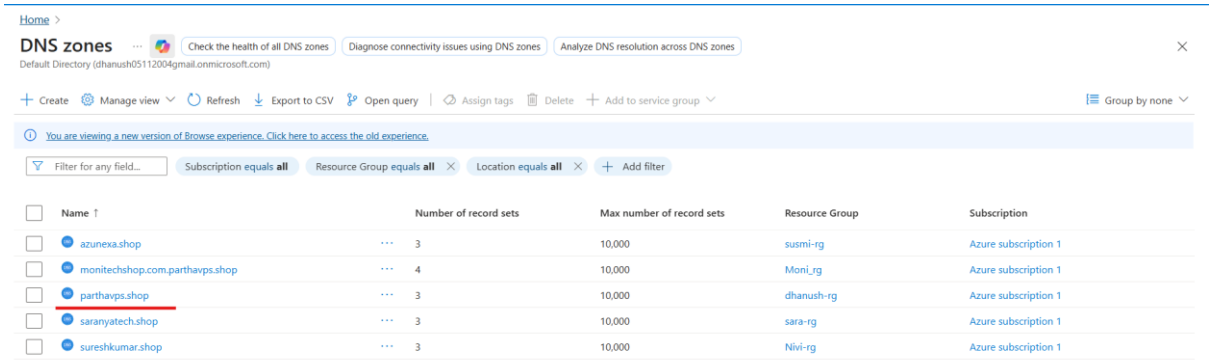

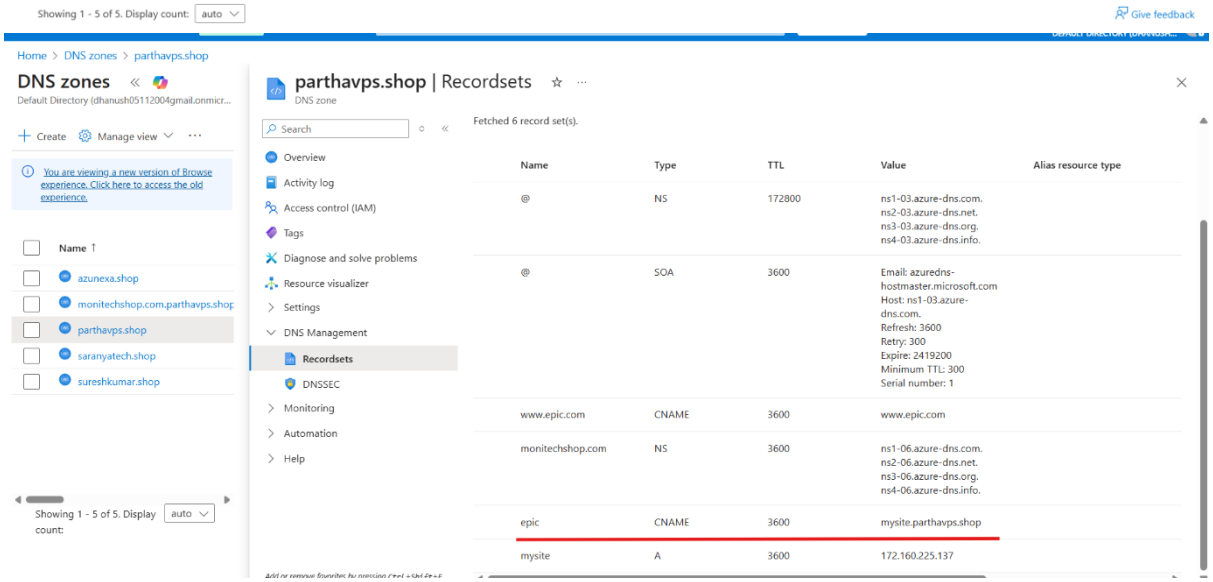

public hosting website

Step 10: Add a CNAME Record (www → app.example.com)

1. In the same DNS zone, click **+ Record set**.
2. Fill in:
    - **Name**: www (this will make www.example.com)
    - **Type**: CNAME
    - **TTL**: 3600
    - **Alias**: app.example.com
3. Click **OK / Save**.

✅ Now www.example.com points to app.example.com.

In the browser enter domain name
